

### **Abstract of the Disclosure**

A modular information handling system includes an upper chassis having a display and a power supply, and a lower chassis having a motherboard, memory, a 5 processor, and a number of drive bays. The upper and lower chassis are interdependent, neither capable of functioning without the other. The upper and lower chassis are separately manufacturable, separately serviceable, and separately shippable.

10 I hereby certify that this paper or fee is being deposited with the United States Postal Service "Express Mail Post Office to Addressee" service on the date indicated above and is addressed to the Assistant Commissioner for Patents, Attn: Box Patent Application, Washington, D. C. 20231.
